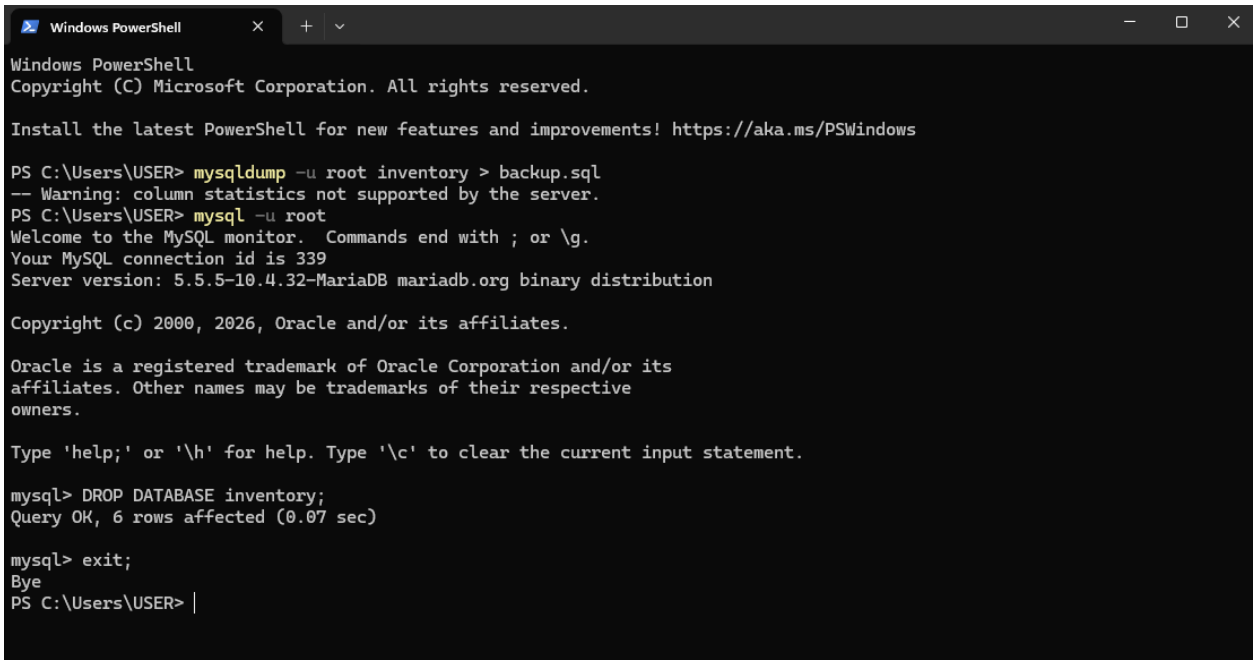
IT 105 – Information Management I

Phase 4: Cloud Backup and Integration of Emerging Database Technologies

This document provides proof of successful database restoration using the backup file (backup.sql). After restoring the database, a validation query was executed to confirm that all records were correctly recovered.



Backup Creation and Database Deletion

The screenshot shows the creation of the backup file using the mysqldump command (inventory > backup.sql), followed by the deletion of the inventory database using the DROP DATABASE command to simulate system failure.

owners.

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

mysql> CREATE DATABASE inventory; EXIT;
Query OK, 1 row affected (0.00 sec)

Bye
```

Database Recreation

The inventory database was recreated to prepare for the restoration process.

```
C:\Users\USER>mysql -u root
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 352
Server version: 5.5.5-10.4.32-MariaDB mariadb.org binary distribution

Copyright (c) 2000, 2026, Oracle and/or its affiliates.

Oracle is a registered trademark of Oracle Corporation and/or its
affiliates. Other names may be trademarks of their respective
owners.

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

mysql> SHOW DATABASES;
+--------------------+
| Database           |
+--------------------+
| information_schema |
| inventory          |
| mysql              |
| performance_schema |
| phpmyadmin         |
| test               |
+--------------------+
6 rows in set (0.00 sec)
```

Restoration Validation

The screenshot confirms that the database was successfully restored. The presence of tables and data verifies that the backup file was correctly applied.
